

# Service Framework Contract for the Provision of CBRN Protection Research & Technology Studies and Expertise

1.000.000 euro

48 Months

Chemical, Biological, Radiological and Nuclear (CBRN) threats and risks are characterised by a rather low probability of occurrence with an extremely high potential impact. These threats are changing and evolving at a fast pace and in addition to the great variety of threat agents, means of delivery and targets make CBRN incidents and accidents particularly difficult to predict.

The European Defence Agency (EDA) awarded our Consortium a framework contract the next four years for the provision of services in the form of “CBRN Protection Research & Technology” studies and expertise. Services are envisaged at two complementary levels with four fields of activities and seven thematic areas focusing on research and studies to grant.

Our CBRN EU universities consortium comprises six core partners, leading in the academia and research in the CBRN innovation field. The Consortium is backed by 32 Supporting Partners, from 12 EU Member States and representing all type of Stakeholders active in the CBRN sector (training centres, first responders, practitioners, PPE providers, research centers).

## Core Partners

The European CBRNE Center at Umeå University initiates, coordinates and participates in research and development projects within the CBRNE field. Primary goal is to increase societal safety through interdisciplinary collaboration.

The “Centre de Technologies Moléculaires Appliquées” at UCL holds a strong multidisciplinary expertise in the development of medical research and applied sciences in the field of security with a strong focus on CBRN risk management.

The Main School of Fire Service research focuses on innovation, means for extinguishing fires and eliminating contamination, technical fire protection systems, emergency equipment, tactics and rescue operations.

AIT provides research and technological development to realize innovations for the next generation of technologies with a view to inclusion of the Human Factor experience

University of Roma Tor Vergata is a leading University in CBRN research and training, offering EU recognised CBRNe Master with NATO selected status, OPCW affiliate and Ministry of the Defence and Ministry of Interior affiliate.

SAFE is specialised in the design and management of international security projects aimed at mitigating and/or reducing CBRNe risks in EU and non-EU countries, with a focus on protection of critical infrastructures.
